

Product Information

Main Material: Stainless Steel AISI 304 or 316

Standard Colors Natural stainless steel finish

Type of Grate: Concealed grates for drainage system

Product Description

Composite resin (BMC) drainage channels provide a resistant, lightweight, and durable technical solution, ideal for stormwater and industrial drainage systems in urban, commercial, and industrial environments. Their “U” profile promotes continuous flow, minimizing the risk of clogging, while the lightweight composite material facilitates handling and installation in projects of various scales.

A reliable and efficient solution that combines technical performance with functional design.

Features

Main Material: Stainless steel

Connection Type: Standard

Load Class: B125, C250 (depending on model)

Net Weight: Depending on model

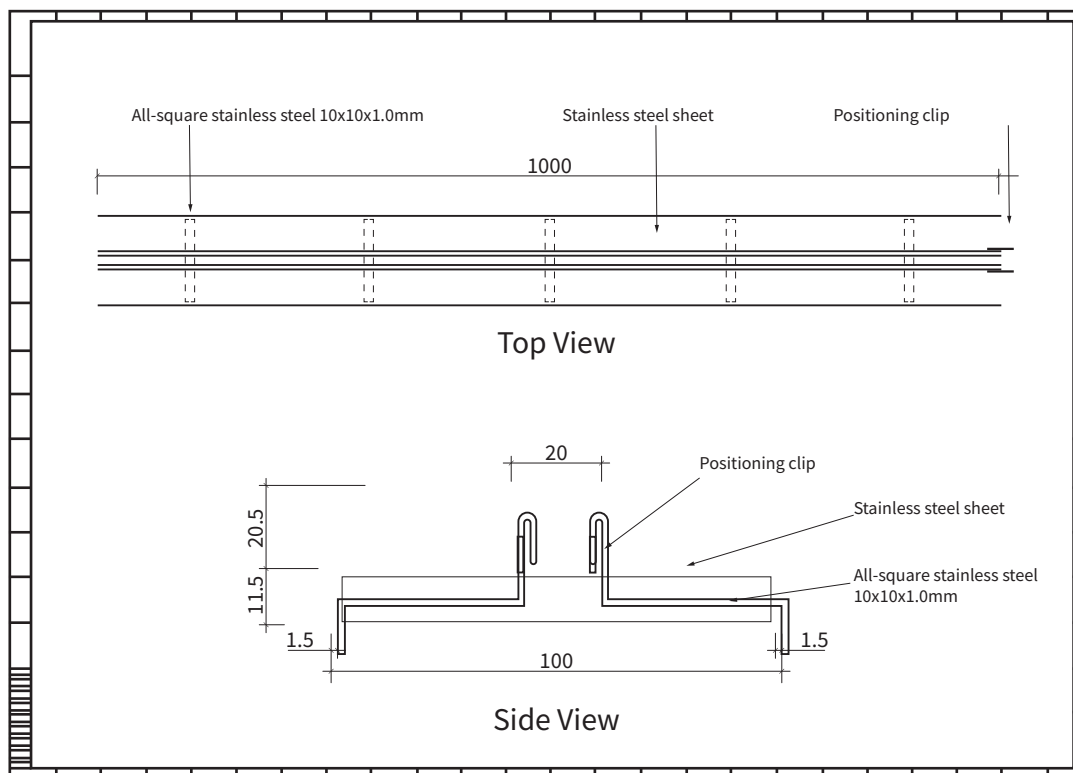

Dimensions

Width (mm)	Length (mm)
100 - 200	500 - 1000
-	-
